

LAB 5(a)	
AIM:	Write a Python Program to Get Total Price of all FuelType from Toyota.csv .File and show it using a line plot with the following Style properties. Generated line plot.
Name:	Gauri Kale
Dept-Sec-Roll no.:	EE-A-09
Registration no.:	23071154
Program.:	<pre> import pandas as pd import matplotlib.pyplot as plt df = pd.read_csv('Toyota.csv') print("Toyota.csv loaded successfully.") total_price_by_fueltype = df.groupby('FuelType') ['Price'].sum().reset_index() plt.figure(figsize=(10, 6)) plt.plot(total_price_by_fueltype['FuelType'], total_price_by_fueltype['Price'], linestyle=':', # Dotted line style color='red', # Red line color marker='o', # Marker for data points label='Total Price') plt.xlabel('Fuel Type') plt.ylabel('Price') plt.title('Total Price of Fuel Types from Toyota.csv') plt.legend(loc='lower right') plt.grid(True) plt.show()</pre>

LAB 5(b)	
AIM:	Experiment with various Seaborn functions and customize your visualizations further. You can explore features like hue, style, col, row parameters to add more dimensions to your plots.
Name:	Gauri Kale
Dept-Sec-Roll no.:	EE-A-09
Registration no.:	23071154
Program.:	<pre> plt.figure(figsize=(8, 6)) sns.histplot(tips_data['total_bill'], bins=15, kde=True, color='skyblue') plt.title('Distribution of Total Bill Amounts') plt.xlabel('Total Bill Amount (\$)') plt.ylabel('Frequency') plt.show() # Create a scatter plot of total bill vs tip plt.figure(figsize=(8, 6)) sns.scatterplot(x='total_bill', y='tip', data=tips_data, color='coral') plt.title('Total Bill Amount vs Tip') plt.xlabel('Total Bill Amount (\$)') # Create a box plot of total bill amounts by day plt.figure(figsize=(8, 6)) sns.boxplot(x='day', y='total_bill', data=tips_data, palette='coolwarm') plt.title('Total Bill Amounts by Day') plt.xlabel('Day of the Week') plt.ylabel('Total Bill Amount (\$)') plt.show()</pre>
